

KIRYL TARASENKA – SENIOR SOFTWARE ENGINEER

SUMMARY

React Native Engineer with 9+ years of experience in outsourcing and product development, specializing in building scalable cross-platform applications and migrating legacy systems to modern architectures.

Strong focus on performance optimization, problem solving, and delivering high-quality user experiences across iOS, Android, and Web platforms.

Hands-on experience with brownfield development and migration, including adapting existing native and web solutions into unified React Native architectures. Familiar with Backend-Driven UI (BDUI), building flexible UI renderers, and maintaining compatibility with backend-defined schemas.

Experienced in leading small-to-mid-size teams, contributing to architectural decisions, and collaborating with cross-functional teams across the full development lifecycle.

Solid understanding of modern development practices (SOLID / KISS / DRY), with a focus on maintainability, scalability, and clean architecture.

Proactive and results-driven team player with strong communication skills and ability to adapt to new technologies and complex systems.

Actively leveraging AI-assisted development tools (including Claude Code and GitHub Copilot) to accelerate development, improve code quality, and support refactoring.

Key technologies:

React Native, Redux, MobX, React Navigation, TypeScript, styled-components, Axios, REST APIs, GraphQL, WebSockets, react-native-reanimated, Firebase, redux-saga, redux-thunk, React Query, performance optimization.

Proven ability to:

Design scalable and maintainable architecture

Participate in technical discussions and requirements analysis

Lead teams and deliver apps to App Store / Google Play

Build cross-platform UI components (iOS, Android, Web)

Work with BDUI and dynamic UI rendering

Support migration from native/web to React Native (brownfield)

Integrate authentication (Facebook, Google, Apple)

Implement analytics and improve observability

Conduct code reviews and maintain high code quality

Use AI tools to accelerate development and improve maintainability

SKILLS

AI

- **AI Safety:** AI Safety
- **AI Native Engineering:** AI Native Engineering

Academic Disciplines

- **Humanities:** English, Russian
- **Applied Sciences:** SOLID (object-oriented design principles), Software Development, Design patterns [Software Engineering], Clean Code, AI Ethics

Engagement Types

- **Custom Software & Application Development:** Custom Software & Application Development
- **Security, Risk and Compliance Program:** Security, Risk and Compliance Program
- **Digital Transformation Program:** Digital Transformation Program

Engineering Practices

- **Digital Engagement:** Accessibility in iOS, iOS Swift, Accessibility Fundamentals, JavaScript (Frontend), Accessibility on Android
- **Data & Analytics:** Data Management, AI Solution Engineering
- **Advanced Technology:** AT/Agile, Generative AI Fundamentals, Gen AI Assisted Development, Cloud Fundamentals, Software Design, Engineering Excellence, Prompt Engineering, Continuous Integration, Software Engineering Processes, Application Architecture, Software Engineering Knowledge & Experience, Continuous Delivery, Software Engineering Practices, Troubleshooting
- **Quality Engineering:** Unit Testing

Industries

- **Healthcare:** HealthTech, Healthcare Payer
- **Software & Hi-Tech:** Digital Marketplaces
- **Financial Services:** Open Banking & Payments, Asset Management, Commercial Banking

Leadership & Soft Skills

- **Leadership:** Organizational culture ambassador, Driving Change and Innovation, Clarity and argumentation, Creativity, Leadership
- **Communication:** Organizational Savviness, Communication, Being a Team Player, Active listening, Building dialogue, Conflict management
- **Consultancy:** Consultancy
- **Business Acumen:** Business Acumen
- **Diversity, Equity, and Inclusion:** Diversity, Equity, and Inclusion
- **Managing Teamwork:** Managing Teamwork
- **Growth Mindset:** Continuous learning, Adaptability
- **Ownership:** Self-Management, Ownership

Managerial

- **General Management:** Prototyping, Interviews, Agile, Software Development Methodologies

Technologies

- **IDEs:** Xcode, Github Copilot, Android Studio

- **Frameworks:** Next.js, React Native, Mocha, Tailwind CSS, Jest, ReactJS
- **Computer Languages:** JavaScript, Kotlin, CSS, Java, Python, Swift, TypeScript
- **Solutions:** Git, Apollo, axios, ESLint, Fastlane, Atlassian Jira, Yarn
- **Platforms:** Android SDK, OpenAI Codex, Anthropic Claude Code, Firebase, AI DIAL, Anthropic Claude
- **Data:** Realm Database, MySQL, SQL
- **Operating Systems:** iOS, Android
- **Libraries:** Redux Thunk, Redux, mobx, Detox, Redux Saga
- **AI Assistants:** AI Assistants, Microsoft Copilot
- **Standards:** GraphQL, Web Communication Protocols, REST API, OWASP Top 10, JSON

WORK EXPERIENCE

Jun-2026 - Aug-2026 - EPAM Systems, <https://www.epam.com/>

Project Roles: Engineer

Client: NDA

Client Description: European e-commerce platform offering fashion and lifestyle products in multiple markets.

EPAM Project Description: Migration of the Consent screen to the new React Native app

Responsibilities:

- Led the migration of the Consent screen (premise) to the new React Native app within a brownfield application
- Analyzed existing native implementations and clarified requirements; proposed improvements to the original approach
- Worked extensively on accessibility (a11y): keyboard navigation, screen reader support, dynamic font scaling, and dark/light theme support

Mar-2026 - May-2026 - EPAM Systems, <https://www.epam.com/>

Project Roles: Engineer

Client: EPAM Systems, Inc.

Client Description: Global IT services and consulting company offering custom software development and digital transformation solutions.

EPAM Project Description: Completed English language courses, improving proficiency from B1 to B1+ Enhanced qualifications through courses by Anthropic (AI tools, prompt engineering, working with LLMs) Studied modern trends and best practices in React Native development

Responsibilities:

Dec-2024 - Feb-2026 - EPAM Systems, <https://www.epam.com/>

Project Roles: Developer

Client: NDA

Client Description: UAE-based technology subsidiary providing AI and technology solutions to group affiliates.

EPAM Project Description: The project focused on providing staff augmentation services for a client in the hotel industry, specifically targeting attractions and hotels. The engagement involved remote staff augmentation across various roles, following a Time & Materials (T&M) model. As a Developer, I was responsible for implementing features to meet project requirements effectively, leveraging AI-assisted development tools to accelerate delivery, improve code quality, and support documentation.

Responsibilities:

- Developed and implemented features such as Payment, Stories, Deeplinking, Reels offers, Optimisation lists.
- Resolved architectural challenges and ensured seamless integration of Telr.
- Conducted demos, gathered feedback, and collaborated with adjacent departments to refine project deliverables.
- Technologies Used: React Native, Zustand, TypeScript, Firebase tools, React Query, React Navigation, and AI-assisted development tools including GitHub Copilot and Claude Code.

Sep-2023 - Oct-2024 - EPAM Systems, <https://www.epam.com/>

Project Roles: Key Engineer, Engineer

Client: NDA

Client Description: Global retail company managing supermarket and e-commerce brands across Europe and the U.S.

EPAM Project Description: Mobile Convergence program for European markets. Scope of the program is technical re-platforming - changing tech fundamentals, switch to new stack from native apps to ReactNative, implement feature toggling and A/B mechanics, modularity etc. Deliver new Look and Feel with Design System - same UX (customer journey), different UI. Align existing functional core flows to White Label approach.

Responsibilities:

- Developed features for the project, conducted demos features and gather feedback, resolved complex architectural challenges to enhance system performance, communicated with various adjacent departments to address issues related to team members who had left the project, implemented project requirements effectively.
- Substituted for the team lead during specific work periods

May-2023 - Sep-2023 - SQVR, <https://sqvr.ru>

Project Roles: Senior React-native Developer

Client: Tools

Project Description: SQVR is a service for homeowners and non-residential premises, managers and contractors, which allows you to fully manage an apartment building and village, and receive all the necessary information online.

Responsibilities:

- I was responsible for communication with customer and designer, implementation of the design of the customer, deciding on system architecture, reviewing the code and rewrite legacy code.

Tools and Technologies:

- React-native, mobx, graphql, axios, restful, socket.io, fastlane, react-navigation

Team:

- 4 Mobile, 4 FE, 3 BE, 3 QA, 3 UI/UX, 1 PjM

Mar-2023 - May-2023 - No Company

Project Roles: Engineer

Project Description: Rest and relocation

Responsibilities:

Dec-2022 - Feb-2023 - Finstek, <https://finstek.com>

Project Roles: Senior React-native Developer

Client: Trading platform

Project Description: Trading platform

Responsibilities:

- I was responsible for communication with the business-analytics, developing Android and IOS application, configuration and processing of the requests from the server.

Tools and Technologies:

- React-native, mobx, socket.io, ESLint, react-native-calendars

Team:

- 20+ members

May-2021 - Dec-2022 - Wowmaking, <https://wowmaking.net/en/main/>

Project Roles: Team Lead, Senior React-native Developer

Client: Fitness and Health

Project Description: It is an AI service for detecting and analyzing your reflections.

Responsibilities:

- Architectural solutions, discussion of requirements, leading dev team deploying the app in Apple Store and Play Market

Tools and Technologies:

- react-native, react-navigation, redux, axios, reanimated, react-native-svg, lottie-react-native, Kotlin, Swift, ML

Team:

- 3 FE, 1 BE, 1 UI/UX, 1 PrM, 1 PjM, 1 QA

Feb-2021 - May-2021 - Wowmaking, <https://wowmaking.net/en/main/>

Project Roles: Senior React-native developer

Client: Fitness and Health

Project Description: It is a habit tracker. Detailed customization of any habits and notifications for maintaining them.

Responsibilities:

- I was responsible for architectural solutions, implementation of widgets, configuration of billing and injecting widgets to react-native app.

Tools and Technologies:

- React-native, Redux, React-navigation, Analytics, Billing, styled-components, prop-types, react-native-reanimated, detox, react-test-renderer, lottie-react-native, ESLint, lodash.js, reselect.

Team:

- 5 FE, 1 BE, 2 QA, 1 PM, 2 UI/UX

Sep-2020 - Feb-2021 - Wowmaking, <https://wowmaking.net/en/main/>

Project Roles: Team Lead, Senior React-native Developer

Client: Education

Project Description: It is a brain-training app which helps you keep your brain healthy and efficient. It consists of specially designed courses to improve your memory, math, language, attention, speed, reaction and problem-solving abilities through playing an entertaining game.

Responsibilities:

- I was responsible for the application's architecture, leading the team, setup communication through pair "react-native - Unity" and reviewing the code, implementing the games on Unity.

Tools and Technologies:

- React-native, MobX, React-navigation, react-native-i18n, styled-components, prop-types, dayjs, Firebase, ESLint, lodash.js, moment.js, customer platforms.

Team:

- 3 FE, 1 BE, 1 QA, 1 PM, 1 Unity, 1 UI/UX, 1 2DArtist

Sep-2019 - Sep-2020 - Wowmaking, <https://wowmaking.net/en/main/>

Project Roles: Team lead, Senior React-native developer

Client: Reading

Project Description: It is a collection of scary stories, funny stories, fantasy, and romance ... It allows the user to read the best stories and quests in a chat format with photos and videos.

Responsibilities:

- I was responsible for architectural solutions, analytics, configured billing, leading the team and reviewing the code, implementing of the design of the customer, designing and application development for Android and IOS.

Tools and Technologies:

- React-native, redux, customer platform, ESLint, react-native-i18n, lodash.js, Firebase, moment.js, customer platforms.

Team:

- 3 FE, 1 BE, 1 PM, 1 QA

Mar-2019 - Sep-2019 - Qulix Systems, <https://www.qulix.com>

Project Roles: Middle React-native Developer

Client: Fitness and Health

Project Description: It is a service that provides unique tracks for meditation.

Responsibilities:

- I was responsible for communication with the customer, participated in the modeling of the application architecture, setup analytics (Google, Branch.io, UXCam, AppFlyer), deployed the app in Apple Store and Play Market, setting sale products, communicate with API and review code. Developing IOS/Android application. Implementation of the design of the customer, design development, application testing (jest+react-test-renderer).

Tools and Technologies:

- React-native, Redux, React-navigation, Saga, Firebase, ESLint, lodash.js moment.js, VS code.

Team:

- 3 FE, 1 BE, 1 PM, 1 BA, 1 QA

Jan-2018 - Mar-2019 - Qulix Systems, <https://www.qulix.com>

Project Roles: Junior-Middle React-native Developer

Client: Mobile banking

Project Description: Complex digital banking system (DBO). Developed a mobile dashboard for bank clients using React Native.

Responsibilities:

- Collaborated with business stakeholders and system analysts to define requirements
- Participated in application architecture design, contributing to a modular and scalable UI structure
- Developed iOS application (focused on iPad Air 2) using React Native
- Implemented UI based on design specifications
- Led demos for stakeholders and participated in code reviews
- Performed testing and validation of implemented features
- Key Contributions:
 - Contributed to a modular, feature-based architecture, where independent dashboard modules were developed and integrated into a unified application (similar to micro-frontend approach)
 - Built reusable UI components and improved maintainability of the codebase
 - Integrated frontend with internal APIs and workflows
 - Collaborated within a large multi-team environment (50+ engineers), aligning development across multiple teams

Tools and Technologies:

- React Native, ESLint, lodash.js, moment.js, Node.js (mock server), internal API platform, VS Code

Team:

- 50+ members (4 teams: 3 development teams, 1 QA team)

May-2017 - Jan-2018 - Qulix Systems, <https://www.qulix.com>

Project Roles: Junior React-native Developer

Client: Mobile Banking

Project Description: It is a complex DBO system for one of Belarusian banks. Our part was mobile banking for physical persons on React Native.

Responsibilities:

- I was responsible for communication with the business-analytics, make technical proposals. Develop Android and IOS application. Build and upload sources on server. Implementation of the design of the customer, design and application development, application testing.

Tools and Technologies:

- React, React-native, JavaScript, material design, CSS, Appium, VS code.

Team:

- 20+ members

Jun-2016 - Apr-2017 - EllipsolT+

Project Roles: Junior Java Software Developer

Client: NDA. Traveling, booking hotels for clients

Project Description: Development of components and support of the system allowing controlling the requests of users for the Russian IT company.

Responsibilities:

- I was responsible for Analyzing user requirements and translating them into functional specifications, writing technical documentation, developing code (both back-end and front-end) and unit tests, deciding on system architecture, unit and integration testing, supporting and troubleshooting, bug fixing, participating in status meetings and team lead calls.

Tools and Technologies:

- Java, Java EE, JPA, OpenJPA2, Spring MVC, Bootstrap, HTML5, CSS, Apache Tomcat, Spring Security, Servlets, JSF, JNDI, Jackson, JSON, Javascript, Gulp, PostgreSQL, Maven, Git

Team:

- 3 BE, 1 FE

EDUCATION

Name of the Education Establishment: FRANCISK SKORINA GOMEL STATE UNIVERSITY

Faculty/College: Physics and Information Technology

Department: Automated Systems Of Information Processing

Degree (diploma): Bachelor
